                                                                 The present sequence is given in a specification relating to a rat ganglisciate Specific alphal-Ziucosyltransferase protein. The protein or its cellular fraction is useful for synthesis of a molecule comprising Pucalphal-ZGalbetal-3GalNac, a glycolipid, glycoprotein, glycolipoprotein or a free oligosaccharide comprising Fucalphal-ZGalbetal-3GalNac. The method involves contacting alphal-Ziucosyltransferase with GDP-fucose and a molecule or glycolipid, glycoprotein, glycolipoprotein or useful for synthesis of fucesyl-GML by contacting the protein with GDP-fucose and ganglioside GML1. The obtained glycoproteins,

(alphal-2Fuct) enzyme and its corresponding nucleic acid. This nucleic acid is specific for a carbohydrate moiety found in ganglioside GM1, a terminal galactose betal-3N-acetylgalactosamine (Galbetal-3GalNac) saccharide. Alphal-2FucT DNA is useful for producing rat alphal-2FucT protein by recombinant techniques. Alphal-2FucT DNA is useful for the proparative synthesis of fucosyl containing glycolipids, glycolipids, glycolipids, glycolipids, glycolipids as a seguine and oligosaccharide, and for preparing fucosyl-GM1. Alphal-2FucT DNA is useful for detecting oncogenic transformation which involves assaying for changes in expression of alphal-2FucT sactivated in cell transformation, antisense sequences derived from alphal-2FucT DNA are useful for inhibiting, suppressing antisense therapy. The present sequence is rat hepatoma H35 cell alphal-2FucT catalytic domain encoding DNA.
  techniques and for detecting oncogenic transformation of test tissues
                                                                                                           invention relates to rat GMI-specific alphal-2fucosyltransferase

New rat ganglioside GMI-specific alphal-2Fucosyltransferase, useful for preparation of fucosyl GM1 which is useful as a nutritional composition or immunotherapeutic for cancer and neurological diseases

Claim 10; Fig 5; 91pp; English.

009 900 999 099

The present sequence is given in a specification relating to a rat ganglioside GM_1-specific alphal-2fucosyltransferase protein. The protein or its callular fraction is useful for synthesis of a molecule comprising Fucalphal-2Galbetal-3GalNac, a glycolphid, glycoprotein, glycolphoprotein or a free oligosaccharide comprising Fucalphal-2Galbetal-3GalNac. The method involves contacting alphal-2fucosyltrabgierase with GDP-fucose and a molecule or glycolpid, glycoprotein, glycolpoprotein or oligosaccharide having a terminal Galbetal-3GalNac group. It is also useful for synthesis of fucosyl-GM_l by contacting the protein with

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            In the invention trades to rate out special alphal 2100005 transleaded acid is specific for a carbohydrate moiety found in ganglioside GM1, a terminal galactose betal-3N-acetylgalactosamine (albeatal-3GalNAC) saccharide. Alphal-2FucT DNA is useful for producing rat alphal-2FucT protein by recombinant techniques. Alphal-2FucT DNA is useful for producing rat alphal-2FucT preparative synthesis of fucesyl containing glycolipids, glycoproteins, glycolipoproteins and oligosaccharide, and for preparing fucesyl-GM1. Alphal-2FucT DNA is useful for detecting oncogenic transformation which involves assaying for changes in expression of alphal-2 FucT. Since alphal-2FucT is activated in cell transformation, antisense sequences derived from alphal-2FucT DNA are useful for inhibiting, suppressing or treating cancer. Alphal-2FucT DNA is useful in gene therapy and antisense therapy and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Rat hepatoma H35 cell alphal-2fucosyltransferase, useful for producing GM1-specific alphal-2fucosyltransferase enzyme by recombinant techniques and for detecting oncogenic transformation of test tissues

r (Se) glycosyltransferase (see AAM37855), an enzyme ffinity for type I and type III substrates. It was pige I was probe.

If inity for type I and type III substrates. It was probe.

Introduction of glycosyltransferase undman Fyri. Introduction of glycosyltransferase undman Fyri. Introduction of glycosyltransferase unch as porcine Se nucleic actio, into a tissue ced expression of unwanted carbohydrate epitopes on estable for transplantation, i.e. less for increased immunological acceptability. A lof increased immunological acceptability. A cacceptable to a recipient species involves reducing hydrate on the donor cell that causes it to be non-self by the recipient pecies involves reducing hydrate on the donor cell that causes it to be non-self by the recipient by causing a nucleic acid ransferase such as Se to be expressed in the cells. S, such as retroviral packaging or producer cells, nucleic acids can be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    57.4%; Score 612.8; DB 19; Length 1043; 80.6%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence encodes pig secretor used in an example of the present invention describes nucleic acids (NA) encoding a chimaric glycosyltransferase. The NAs comprise a catalytic domain of a first glycosyltransferase (GT) and a localisation signal of a second GT, whereby when the NA is expressed in a cell and where the chimaric enzyme is located in a marea of the cell where it is able to compete for substrate with a second GT, resulting in reduced levels of a product from the second GT. The NAs can be used to produce cells and organs with desired glycosylation patterns. Products and methods of the epitopes in cells, tissues or organs which may be used in needinable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TICAGGATCAGCCTCCCGGTGTTACACAGCGACACGGCCAAAAAAATCCCATGGCAGAAT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence encodes the human Sec2 protein of the invention. The DNA encodes a alpha(1.2) fucosyltransferase and is the Secretor alpha(1.2) fucosyltransferase locus, that cross hybridises with the Hi blood group alpha(1.2) fucosyltransferase gene. The DNA is useful for producing a recombinant human GDP-L-fucose.Deta-D-galactoside 2-alpha-L-fucosyltransferase (FUT2) which can be used for genotyping an individual as a secretor or nonsecretor as it is known that nonsecretors homozygous for a mutant allele of the FUT2 gene that has a stop codon in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              548 ATGTGCGCCGAGGGGACTATGTGCATGTCATGCCTAATGTGTGGAAGGGCGTGGTGGCTG

The present invention describes a method (M1) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in comprises a sequence (S) selected from 847 sequences (S) where (I) comprises a sequence (S) selected from 847 sequences (given in ABLG1664 to ABL70110), or is at least 95% identical to (S), where a change in capsession is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a crivity and can properties of the agent. MI can be used in the structure and/or properties of the agent. MI can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oseoplaqual, ovarian, kidney, prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell cancer, infiltrating ductal cancer, infiltrating ductal cancer, squamous cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's tumour.
                                                                                                                                                                                                                                                                                                                               Horrigan S;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set
                                                                                                                                                                                                                                                                                                                                    Ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 3088 BP; 723 A; 839 C; 798 G; 728 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            anti-neoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (1) of a signature gene set, where (1) comprises a sequence (5) selected from 847 sequences (given in ABL51664 to ABL70110), or is at least 95% identical to (5), where a change in expression is indicative of anti-neoplastic activity. (1) has cytostatic activity and can be used of anti-neoplastic activity. (1) has cytostatic activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of MI, and the data is sufficient to convey the chemical structure and/or properties of the agent. MI can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       oesophageal, ovarian, kidhey, prostate or pancreatic cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  188 ACGCCACACTTTCCACTGGCCAGGATGAACGGACGGCTTGCGTTCATCCCGCATCCA

The present invention describes a method (M1) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in ABLG164 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of MI, and the data is sufficient to convey the chemical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    treatment of cancer such as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney, prostate or paroreatic cancer, adenocarcinoma, carcinoma, clear cell cancer, infiltrating ductal car infiltrating lobular cancer, squamous cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Horrigan

The present invention describes nucleic acids (NA) encoding a chimaric glycosyltransferase. The NAs comprises a catalytic domain of a first glycosyltransferase (GT) and a localisation signal of a second GT, whereby when the NA is expressed in a cell and where the chimaric enzyme is located in an area of the cell where it is able to compete for substrate with a second GT, resulting in reduced levels of a product from the second GT. The NAs can be used to produce cells and organs with desired glycosylation patterns. Products and methods of the epitopes in cells, tissues or organs which may be used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             354

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  902
                                                                                                                                                                The present sequence encodes swine alpha(1,2) fucosyltransferase (FUII). The specification describes methods relating to Escherichia coli-resistant swine. One of the methods for identifying a swine resistant to E. coli-associated intestinal disorders, comprises determining whether the base at 307 of alpha(1,2) fucosyltransferasel gene (FUII) is adenine (sic), in which case the swine are resistant. I porcine FUII polymorphisms can be used to develop drugs for the treatment of swine having E. coli-associated disease. The methods can also be used in breeding programmes to identify swine with resistance

and the assay itself is used as a basis for a kit, applied to swine of any age, in detecting polymorphisms associated with E. coli F18 receptors. The polymorphisms are useful in developing drugs to treat swine with E. coli-related diseases. However, a mutated form of the porchine FUTI gene may interfere with the normal enzyme and prevent it from producing the intestinal receptor for F18. The detection of polymorphic markers in the method disclosed enables the detection and treatment of E. coli-related intestinal diseases in swine, where there

The method comprises determining whether a genetic polymorphism associated with resistance to colonisation is present in a swine sample, and then inferring that the swine is resistant if it is homozygous for the polymorphism. The method uses the swine alpha-1.2-fucosyltransferase (FUT1) polymorphism. The present sequence encodes swine FUT1. The method enables the breading of swine that are resistant to E. coli-related diseases. This method comprises breeding swine that have a genetic polymorphism in the FUT1 are resistant to E. coli-related intestinal disorders if, in a sample taken, the only nitrogen base at residue 307 in the FUT1 gene is adenine. Larger amplified fragments from the assay can be used for FFLP analysis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This is the nucleotide sequence of the pig FUTI gene encoding alpha1-2 fucosyltransferase (see AAY9302). A polymorphism at position 307 of the coding region is associated with susceptibility to F18 Escherichia coli colonization; pigs homozygous for adenine at position 307 are resistant to colonization, while heterozygous animals homozygous for quanime at position 307 are resistant to colonization. A claimed method for improving weight castant to E. coli colonization and feeding these animals high levels of plant-based protein concentrate. A claimed method for preventing F18 E coli colonization in swine, especially swine that are genetically susceptible to F18 E. coli colonization in swine, especially swine that are genetically susceptible to F18 E. coli colonization in swine, replacing some or all of the plant-based proteins in the diet with unimal-based proteins. The polymorphism in the FUTI gene is also associated disease. The polymorphism in the FUTI gene is also per-RFLP tests (see also AAZ9418-19).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Improving weight gain in swine using swine genetically resistant
Escherichia coli and feeding swine high levels of plant based protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        39.7%; Score 423.8; DB 21; Length 1269; 69.6%; Pred. m,

Feeding swine genetically susceptible to F18 Escherichia coli colonization with a low plant protein based diet increases weight gain and lowers intestinal disease associated with E. coli infection This sequence represents the swine alpha (1,2) fucosyltransferase (FUT1) gene. A FUT1 gene in which there is a base other than adenine at position 307, may be used for improving weight gain in swine that are genetically susceptible to F18 Escherichia coli. The weight gain may be activated by feeding a diet of at least 40% animal based proteins. The feeding method is used to control F18 E. coli associated intestinal disease in swine. Sequence 1269 BP; 219 A; 414 C; 361 G; 275 T; 0 other; Claim 1; Column 13-18; 9pp; English.

OTHER INFORMATION: The encoded product of nucleotide SEQ ID NO:
OTHER INFORMATION: 1: is the enzyme, GDP-L-fucose- -D-galactoside 2-alpha-fucosy
OTHER INFORMATION: which has the amino acid sequence described in SEQ. ID NO:1:.
OTHER INFORMATION: is responsible for the synthesis of 2'-fucosyllactose.
